Summary

Final-year Computer Science student (B.Tech, 2023–2027) with hands-on experience building Python backend systems and automating Linux infrastructure. RHCSA-certified, currently completing RHCE with Ansible automation training complete and exam scheduled. Comfortable working across RHEL environments, containers, and CI/CD pipelines, with a track record of shipping deployed, tested tools end-to-end. Curious about systems internals and motivated to contribute within a collaborative open-source engineering team.

Skills

Linux & Systems: RHEL 9, systemd, SELinux, FirewallD, LVM, Networking (nmcli), Bash / Shell Scripting

Automation & IaC: Ansible (Playbooks, Inventories, Roles)

Containers & Virtualization: Podman, Docker, VMware Workstation

Programming & Backend: Python, Flask, REST APIs, JWT Authentication

Databases: SQL (MySQL / SQLite)

Cloud: AWS (EC2, basic administration)

Version Control & CI/CD: Git, GitHub, GitHub Actions

Projects

RHEL Fleet Manager — Ansible Automation Dashboard

<https://github.com/KunalGupta052/rhel-fleet-manager>

- Built a Python/Flask dashboard that triggers Ansible playbooks across a multi-node Linux fleet over SSH, automating user management, package installation, service monitoring, and log rotation from a single control panel
- Simulated a realistic multi-node fleet using Podman containers on a RHEL 9 virtual machine, allowing every playbook to be tested safely in isolation before touching real infrastructure
- Logged every automation run to a SQL database and surfaced live execution status through a web-based control panel, giving visibility into what changed, when, and why

Dincharya Analyzer — Full-Stack Web Application

GitHub: https://github.com/KunalGupta052/dincharya_analyzer | Live Demo: <https://dincharya-analyzer.onrender.com/>

- Built and containerized a full-stack Python/Flask and SQL application with Docker, ensuring the app behaves identically across local development and production
- Set up a continuous integration and deployment pipeline with GitHub Actions, automatically running tests and deploying the application on every commit
- Designed the backend's API layer around structured request validation and response handling to keep data integrity consistent across the application

Plant Doctor — AI-Powered Plant Disease Diagnosis API

GitHub: <https://github.com/KunalGupta052/plant-doctor> | Live Demo: <https://kunalgupta052-plant-doctor.onrender.com/>

- Built and deployed a Flask REST API that accepts plant images and returns structured disease diagnoses by integrating an external AI image-analysis service
- Implemented request validation, error handling, and JWT-based authentication to keep end-to-end request processing reliable
- Containerized the application with Docker and deployed it to a live environment, covering the complete backend build-to-deploy workflow

Education

Bachelor of Technology, Computer Science & Engineering

Poornima Institute of Engineering and Technology, Jaipur

2023 – 2027

CGPA: 8.22 / 10.00

Certifications & Training

Red Hat Certified Engineer (RHCE)

Ansible automation training complete; final performance-based exam scheduled.

Yet to take

Red Hat Certified System Administrator (RHCSA)

<https://www.credly.com/badges/cf19606c-d6d9-4066-8407-82d836ac392b>

Certified

Earned through Red Hat's hands-on, performance-based practical exam. Training covered RHEL installation, user and group management, LVM-based storage administration, SELinux security policy, systemd service management, and network configuration.
